

CONTENTS

How to enjoy this book.....	iii
Contents.....	v
Notation	ix
Chapter I. Introduction to Statistics	1
I-1. Get into the statistical mode of thinking	1
1. What is statistics?.....	1
2. The nature of data	2
3. Uses and abuses of statistics	3
4. Design of experiments and sampling	4
5. Technical tools for statistical analysis and research. Modeling	6
I-2. Organization and representation of data	7
1. Probabilities and uncertainties	7
2. Frequencies and visual representation	8
Other representations	12
Stem-and-leaf-diagram	12
Homework	14
I-3. Numerical measures of quantitative data	15
1. Measures of central tendency	15
2. Measures of dispersion or deviation	19
Homework	20
Chapter II. Probabilities and Probability Distributions	22
II-1. Probability	22
1. Practical computation of probabilities	25
2. Conditional (relative) probability	26
Homework	29
II-2. Random variables and constructions with them	30
1. The averages and expectation, payoff	35
2. Variance and standard deviation; covariance and correlation	38
3. Utility	42
4. Moment generating functions	44
5. The characteristic function	46
Homework	47
Chapter III. Some Concrete Probability Distributions	49
III-1. Some frequently encountered distributions	49
(Continuous) uniform distribution – in one dimension	49
(Discrete) uniform distribution – in one dimension	51
Exponential distribution	52
Gamma distribution	53

The Weibull distribution	54
The Bernoulli distribution	55
Binomial distribution	55
The Poisson distribution	56
Geometric distribution	58
Negative binomial distribution	59
Beta distribution	60
Pareto distribution	61
(Standard) Cauchy distribution	62
Homework	63
III-2. The normal distribution and its applications	64
Normal distribution	64
1. Some applications of the normal distribution	65
2. Determining the z and the x values when an area under the normal distribution curve is known	67
3. The normal approximation to the binomial distribution	68
4. Sampling distributions	69
III-3. Distributions derived from the normal distribution	70
Lognormal distribution	70
Rates of return	71
The χ^2 distribution with n degrees of freedom	73
Student's t distribution	74
Fisher's F distribution	75
Homework	76
Chapter IV. Some Important Tools	77
IV-1. Functions of random variables	77
1. Transformations	77
2. Extrema and order statistics	78
Homework	80
IV-2. Limit results	80
IV-3. Monte Carlo methods	84
Homework	89
Chapter V. Joint Distributions	90
V-1. Random variable vector and its distribution	90
V-2. Multi-dimensional normal distribution	96
V-3. Multi-dimensional uniform distribution	99
V-4. Independent random variables	100
V-5. Conditional distributions	101
V-6. Functions of jointly distributed random variables	105
Homework	108
Chapter VI. Parameter Estimation	111
VI-1. Confidence intervals	111
1. The mean	111

2. Proportion	114
3. Variance	114
4. Two means	115
5. Two proportions	116
VI-2. Hypothesis testing	116
1. The variance	117
2. The mean	119
3. The proportion	120
4. P-values	120
5. Two variances	120
6. Two means	121
7. Two proportions	122
VI-3. Maximum likelihood principle	122
Homework	124
Chapter VII. Regression	125
VII-1. First order, linear model	125
1. Estimators	128
2. Correlation and determination	129
3. Estimation and prediction	131
Homework	133
VII-2. Multiple regression and correlation	134
1. Tests	137
2. Individual regression parameters	137
3. Future values	138
Homework	140
Chapter VIII. Time Series	141
VIII-1. Smoothing techniques	143
Homework	146
VIII-2. Regression approach	148
Homework	149
VIII-3. Autocorrelation, autoregression and moving averages error models .	149
1. Autoregressive models	150
2. Moving average model	152
Homework	154
VIII-4. Fitting, forecasting, and estimating	155
1. Fitting	156
2. Forecasting	156
Homework	157
Chapter IX. Stochastic Processes	159
IX-1. What is a stochastic process?	159
1. Queuing theory.....	161
2. Questions of interest about stochastic processes	162
IX-2. Defining a stochastic process	162

1. Random walks	164
2. Operations with stochastic processes	166
Homework	167
IX-3. Brownian motion, Wiener and Poisson stochastic processes	168
1. Brownian motion, the Wiener process	168
2. Poisson processes	170
Homework	172
IX-4. Integration and differentiation of stochastic processes	172
1. Integrals	172
2. Derivatives	174
Homework	175
IX-5. Markov processes and chains	176
Homework	180
Chapter X. Differential Equations	181
X-1. Ordinary differential equations	181
1. First order ODE's	181
2. Linear differential equations of the first order	182
3. Some non-linear first order ODE that reduce to linear	182
4. Second order ODE's	183
5. Linear differential equations of the second order	184
6. Linear differential equations of second order w. constant coefficients ..	185
X-2. Partial differential equations	185
X-3. Second order partial differential equations	187
1. Classification	187
2. The Black-Scholes equation	190
Homework	192
X-4. A little bit about Fourier series	192
Homework	195
X-5. The diffusion equation and how to solve it	196
Example: Diffusion equation in a bounded domain	196
Homework	200
Statistical Tables	201
Table 1. Standard Normal Distribution	202
Table 2. Student's t distribution	203
Table 3. The $F_{m,n}$ distributions, $\alpha = 0.1$	204
Table 4. The $F_{m,n}$ distributions, $\alpha = 0.05$	206
Table 5. The $F_{m,n}$ distributions, $\alpha = 0.025$	208
Table 6. The $F_{m,n}$ distributions, $\alpha = 0.01$	210
Table 7. The χ^2 distribution	212
